

Experience

QR-Code Hatch

A free web app to generate custom QR codes

For simplicity, I structured this project with HTML5, and styled it using the combination of css3 and Bootstrap. I then handled the interactivensess with jQuery, and the functionality with a javascript library.

Dict

A full-functioning dictionary web app

I created this app with react, and styled it with CSS3, using the CSS preprocessor. I then powered its functionality with the open source dictionary API.

Discord Clone

A clone of the discord website

I I got attracted to the official website of discord and felt like I should rebuild it from the scratch; and I did so, using react, CSS, framer motion, etc.

Personal Portfolio

A SPA website to showcase my projects

I build this SPA website with react and styled it with CSS3, following the BEM methodology. I handled the smooth animations with Framer Motion, and powered the contact form with Javascript and the emailjs library of react.

...and more

About Me

I'm Adeoti Nurudeen, a frontend developer with over 9 years experience in coding and design. Over the years, I've built a variety of web apps with priority on a great user experience (ux).

I'm highly comfortable transforming basic and complex designs and ideas into responsive, interactive, and beautiful websites and applications.

I find learning new stacks and tech tools joyful, and awesome; and it has well become my second nature.

- And I'm open for a frontend developer job offer!
